Dear Authoritative,

I am making this application because your position in your company's LinkedIn posting is suitable for my education, experience, knowledge and skills, and career goals, and I would like to work with you as an intern.

Even though I graduated from Bilkent University Translation Department, I have been focusing mainly on Full-Stack Web Development technologies for more than 2 years. In this process, I can say that I have gained all the requirements of a developer and that I have the knowledge and experience of a Computer Engineering graduate friend, or maybe a little more.

I continued my Full-Stack Developer training from many sources, among these sources is the basis of my bootcamp training named CodeCademy based in America. In addition, I have completed my 3-stage Full-Stack Web Developer training from a Turkish company called Siliconmade Academy. In addition to these resources, I have also benefited from sites such as Udemy and Freecodecamp, and I have seen that these trainings have made a great contribution to bringing me the necessary competence.

In the process of being a developer, I used technologies such as React, PHP, Laravel, Vue, Bootstrap, HTML, CSS, SQL, NoSQL, Tailwindcss, MaterialUI, Nodejs, MongoDB, ExpressJs and many more related technologies written in my CV, as well as mobile development-oriented Flutter and so gained experience on these technologies and more. Although I am mainly a React and Nodejs developer, I can easily adapt to other software languages and technologies.

In addition to my individual experiences, I did a 2-month internship as a Wordpress and PHP developer at Siliconmade Academy, where I studied. In this process, I also helped the projects of CS and CTIS students at Bilkent University. At the same time, I worked as a Core Web Developer in the Google Developer Student's Club for 1 semester and taught the participants the basics of Web Development as well as Google technologies.

Even if my education is related to a different department, I have devoted my career to being a Successful Full-Stack Developer for more than 2 years. During this process, I managed to make individual projects as much as possible and tried to use different technologies in each project.
If you wish, I would like to have a face-to-face/online and detailed interview with you at any time to discuss the requirements of the position and my suitability for the position, and if you have technical tests you have applied, I would like to show myself at the relevant stages.

Yours Sincerely,

Cemal Yiğit Balceli
